RAGHAV PARASHAR

SOFTWARE DEVELOPMENT INTERN | COMPUTER SCIENCE & ENGINEERING

+91 7906941051 | praghav1106@gmail.com | github.com/raghav-prshr | LinkedIn: raghav-prshr

PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on project experience across web application development, backend/API integration, Java programming, databases, and machine learning. Interested in software engineering internships involving problem-solving, core computer science, and building practical applications.

TECHNICAL SKILLS

Languages: Java, C++, Python, SQL
Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
Backend & APIs: Node.js, Express.js, FastAPI, REST APIs
Web: HTML, CSS, JavaScript, React.js
Databases: MongoDB, MySQL, SQLite
Data & ML: Pandas, NumPy, Scikit-learn, Imbalanced-learn
Tools: Git, GitHub, Linux, VS Code, Docker

PROJECTS

KaushalAI — AI-enabled Skill Intelligence & Learning Platform | *React, Node.js, Express.js, Python, FastAPI, MongoDB, REST APIs*

- Contributed to a six-member team project by integrating iGOT Karmayogi course content and learning resources into learner-facing course features.
- Helped identify relevant datasets and contributed ideas that informed platform features and learning-related functionality.
- Worked on course and dashboard functionality, including course modules, thumbnails, and video resources, and collaborated on integration across the application.
- Used Git/GitHub branches for feature development, integration, and merge-conflict resolution.

CPU Scheduling Simulator | *Java, Data Structures & Algorithms*

- Developed an interactive simulator for visualizing CPU scheduling algorithms and comparing process execution metrics.

Network Intrusion Detection System | *Python, Pandas, NumPy, Scikit-learn*

- Worked on a machine-learning-based network anomaly detection project involving data preprocessing, exploratory analysis, model training, and evaluation.
- Explored approaches for identifying anomalous network activity and evaluating model behavior.

Credit Card Fraud Detection | *Python, Pandas, NumPy, Scikit-learn, Imbalanced-learn*

- Built a binary classification pipeline for detecting fraudulent credit-card transactions in a highly imbalanced dataset.
- Performed exploratory data analysis, preprocessing, model training, and evaluation with attention to the minority fraud class.

EXPERIENCE

Data Science Intern — CodTech IT Solutions | June 2026

- Completed project-based work involving classification, regression, exploratory data analysis, and data preprocessing using Python.
- Used Pandas, NumPy, and Scikit-learn to analyze datasets and develop predictive-modeling workflows.

EDUCATION

B.Tech in Computer Science & Engineering | Manav Rachna International Institute of Research & Studies | 2024–2028
CGPA: 6.68/10 | Class XII: 69.8% (Uttar Pradesh Board) | Class X: 87.5% (Uttar Pradesh Board)

ACHIEVEMENTS & TECHNICAL ACTIVITIES

- Smart India Hackathon: Contributed as a technical team member to KaushalAI.
- Research work on machine-learning-based network anomaly detection and comparative model evaluation.
- Open-source collaboration on KaushalAI through feature development and integration.
